Subject: ND levels

Good morning Drew,
I'm following up in regard to our conversation last Thursday evening concerning the non detect levels for both the original sampling event as well as the fall sampling event from 2017. I was hoping you could forward the information regarding the non detect levels the EPA requested be applied to these labs. I had noted that the non detect levels appeared high, I believe 16 ppt for PFOA and 8 ppt for PFOS.

Thank you,
Jillian
